

## Version 1.0

Currently, I have no idea to design the face mask and find out the face mask's data

But for the location of each shop it seems that it is not hard. I have tried google map api, it's not works. So I use a simple free api in mainland called tianapi which provide some information. And I try to used to do a simple search for the confirmed count in different countries. It is cool and works.

Next, I would like to continue use google map api to figure out the location search for the shops which have the face mask for selling.
